Glucocorticoid receptor/adenoviral ORF6 chimaeric fusion gene.
Glucocorticoid receptor/adenoviral ORF6 chimaeric fusion gene.
Human adenovirus; inverted tandem repeat; E4; E1; open reading frame;
expression; late gene; cell line; defective recombinant adenovirus;

Crample 1 Page 40-41; 69pp; French.

The invention relates to novel cell lines which can support the replication and production of defective recombinant adenoviruses which lack all or part of the El and E4 regions. The movel cell lines contain the adenoviral E4 region, esp. the open reading frame 6 and/or 7.

Crample 1 E4 region, esp. the open reading frame 6 and/or 7.

Crample 1 E4 region of a promoter, pref. from MMTV which is regulated by dexamethasone. The E4 OFF6 may also be inserted into the genome as a chimaeric fusion gene (this sequence) comprising a glucocorticold receptor hormone binding domain fused N terminally to the cytoplasm of the cell in the absence of hormone by interaction of the hormone binding domain with the hap90 protein or other factors.

Contacting the fusion protein with the hormone causes translocation of the protein to the cell's nucleus were the ORF6 product functions. The gene was generated by amplifying the sequence encoding the fragment with the adenoviral ORF6 sequence. The defective viruses generated in the new cells can be used for gene therapy e.g. for cystic fibrosis, characterions, etc.

CC adenovirus vector named Ad2-ORF6/PGK-CFTR. This virus lacks E and in its

CC adenovirus vector named Ad2-ORF6/PGK-CFTR. This virus lacks E and in its

CC place contains a modified transcription unit with the phosphoglycerate

CC promoter and a poly A addition site flanking the cystic

CK fibrosis transmembrane condutance regulator (GFTR) cDNA. The POK

CFTR oblact to shut off. The E4 region of the vactor has also been modified

CC subject to shut off. The E4 region of the vactor has also been modified

CC In that the whole sequence has been removed and replace by ORF6, the

CC only E4 gene essential for growth of adenovirus (Ad) in tissue culture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /*tag= z

```

The DNA construct comprises a full length copy of the Ad2 genome from which the early region I genes (EI genes) have been deleted and replaced by an expression cassette encoding CFTR. The expression cassette horlines the promoter for PGR and a poly-A addition signal from the bovine growth hormone gene. The Ad2-ORF6/PGR-CFTR construct differs from that given in Q68002 (Ad2/CFTR-I), in that the latter utilises the endogenous BIa promoter, has no poly-A addition signal directly be administered to the pulmonary airways in the gene therapy of cystic fibrosis. 9786 G; 10000 C; 8597 A; 36335 BP; Sequence 8888888888888

- Determination of this BAC-end sequence was carried out as part of collaboration with the Backeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruifily.org The BDGP Drosophila please see http://www.fruifily.org The BDGP Drosophila and Anton Mammosar in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, EcoRI digestion of Drosophila DNA provided by the BDGP from the 150genic strain v2; on bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or fillters for hybridization from the BACPAC Resource Center can be contained at http://Dacpac.med.buffalo.edu/drosophila_Dac.htm.

- Collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila

melanogaster genome using these BACs. For further information

please see http://www.fruutfly.org The BDGP Drosophila

melanogaster BAC library was prepared by Kazutovo Googewam and

melanogaster BAC library was prepared by Kazutovo Googewam and

Aaron Mammoser in Pleter de Jong's laboratory in the Department of

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo.

Ny. The library is named RPCI-98 and was constructed by partial

Ny. The library is named RPCI-98 and was constructed by partial

ECCRI digestion of Drosophila DNA provided by the BDGP's

pland EST libraries. A more detailed description of the library

and how to order individual BAC clones, the entire library, or

filters for hybridization from the BACPAC Resource Center can be

found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        642 gattitgaacaatattgtggtgctgtgctgcagttactgtgctgatttaagtgagatcag 701
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             797 KKAAITITKKKKGKKKKKKAAKKKKAADRIKKIKWDAAAAAAKKTKDKGKKKKKTKKK 856

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note="Vector: pabloSacBlI; Site_1: Bam H1; Constructed by Sara Melville, University of Cambridge, UK and Nancy Sara Melville, University of Cambridge, UK and Nancy Shepherd, Dupont Merck, Milmington, DB. Genomic DNA was isolated from Trypanosoma brucel (stock TREU927/4) and partially digested with Sau 3AI. DNA fragments were cloned into the Bam H1 site of PahloSacBlI vector (Genbank accession U09128). The average insert size is 65 Kb. coverage: approx 4.4 x the haploid non-minichromosomal

During sequence assembly data is comparated from overlapping clones.

Where differences are found these are annotated as variations

Where differences are found these are annotated as variations

Where differences are found these are annotated as variations

Where differences are found these are annotated as variations

Where differences are found in the sequence submitssion

corresponding to the overlapping clone, as we submit sequences

This sequence is the entire insert of clone 109F14. The true left

end of clone 329As (287822) is at 133206 in this sequence

This sequence has been finished according to sequence map criteria

as follows. An attempt is made to resolve all sequencing problems,

such as compressions and repeats, but not necessarily within known

annotated human repeat sequence elements (e.g. Alu). Where the

Physical map of human 6p21.2-6p21.3: region flanking the
"Centromeric end of the major histocompatibility complex
Genome Res. 8 (6), 631-643 (1998)
                           Human DNA sequence from clone 109F14 on chromosome 6p21.2-21.3. Contains the alternatively spliced gene for Transcriptional Enhancer Factor TEF-5, the 60S Ribosomal Forcein RPLiOA gene, a PUTATIVE ZNF127 LIKE gene, and the PPARD for Peroxisome Proliferator Activated Receptor Delta (PPAR-Delta, PPAR-Beta, Nuclear Hormone Receptor 1, NUC1, NUC1, PPARB). Contains three putative CpG islands, ESTs, STSs, GSSs and a ca repeat AL022721
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AL022721.1 GI:3367610
